

1. An "ignored" file in git is one that:

Ans: Is enumerated in a .gitignore file

2. The command `git rm some_file`:

Ans: Removes some_file from the working file tree and the index

3. The command `rm some_file`

Ans: Removes some_file from working file tree, but not from the repository

4. To list all files in the repository, issue the command:

Ans: `git ls-files` ¶

5. The command `git mv some_file new_name_or_location`

Ans: Moves (renames) the file in both the repository and the working tree
