

1. To get all patches between your current branch and the master branch, do:

*Ans: git format-patch master*

2. The best way to form patches for use with git is to:

*Ans: Use git-format-patch*

3. In modern advanced distributed projects, submitting patches through email is:

*Ans: Something only used for relatively simple submissions, often to subsystem maintainers*

4. When applying patches:

*Ans: It is a good idea to test first with the --dry-run option*

5. Select the true statement:

*Ans: Most modern email clients do not have built-in support for git, so one needs to worry about whitespace, line-wrapping and other potential problems*
